

# Cloud-First Disaster Recovery and Backup as a Service (DRaaS & BaaS)

**Protect, recover, and mobilize workloads across public cloud, private cloud, and hybrid environments.**

## The Challenge

Modern IT environments are more distributed—and more vulnerable—than ever.

- Increasing ransomware and cyber threats targeting critical data
- Hybrid environments spanning on-prem, cloud, and SaaS applications
- Inability to meet aggressive recovery time (RTO) and recovery point (RPO) objectives
- Limited confidence in recovery readiness due to infrequent testing
- High cost and complexity of traditional disaster recovery solutions

## The ivision Solution

ivision delivers a fully managed, cloud-first DRaaS and BaaS solution that enables organizations to protect and recover workloads across public cloud, private cloud, and hybrid environments.

With flexible recovery options—including AWS, Azure, and ivision's private cloud—you can align your disaster recovery strategy to your business, compliance, and cost requirements.

# Flexible Recovery Options

## Public Cloud Recovery

- Recover workloads to AWS or Azure
- Scale on demand with cloud elasticity
- Ideal for cloud-first and hybrid strategies

## Private Cloud Recovery

- Secure recovery in ivision's enterprise-grade data centers
- Predictable performance and compliance alignment
- Dedicated, controlled recovery environment

## Hybrid Recovery

- Combine on-prem, public cloud, and private cloud recovery
- Match workloads to the right recovery destination
- Enable portability and long-term flexibility

# Core Capabilities

## Cloud-First Disaster Recovery

Orchestrated failover and failback across environments  
Support for hybrid and multi-cloud architectures  
Rapid recovery aligned to business SLAs

## Comprehensive Backup (BaaS)

Protection for virtual machines, databases, and applications  
Coverage for on-prem and cloud workloads  
Optional SaaS data protection (e.g., Microsoft 365)

## Cyber Resilience & Ransomware Protection

Immutable backups and air-gapped recovery options  
Rapid recovery from cyber incidents  
Enhanced protection against data loss and corruption

## Automation & Testing

Runbook-driven recovery orchestration  
Non-disruptive testing and validation  
Confidence in recovery readiness

## Fully Managed Services

24/7 monitoring and management  
Proactive health checks and optimization  
Expert-led recovery support when it matters most

## Business Outcomes

Faster, predictable recovery with defined RTO/RPO  
Reduced risk from ransomware and cyber threats  
Lower infrastructure costs with cloud-based recovery  
Increased flexibility across hybrid and multi-cloud environments  
Improved compliance and audit readiness  
Greater confidence through automated testing

## From Backup to Cyber Resilience

Move beyond traditional backup and disaster recovery.  
ivision enables a modern, resilient strategy that protects against outages, cyber threats, and evolving business demands.

## Why ivision

Expertise across data center, private cloud, and public cloud platforms  
Flexible recovery options tailored to your environment  
Proven methodologies for disaster recovery and data protection  
Fully managed services with end-to-end accountability
