

Protecting your business-critical operations starts with a comprehensive backup and disaster recovery strategy. Identify potential threats and implement a recovery plan with iVision's Cloud solutions: Fusion Protect and Recovery. Achieve reliable data protection for your business-critical data and streamline the disaster recovery process for services and applications.

FUSION PROTECT

Focus on Business

Delegate data backup and protection to a Backup-as-a-Service (BaaS) partner like iVision to help you stay focused on business growth and innovation.

Unified Protection. Reliable Results.

iVision Fusion Protect offers a comprehensive data-protection platform delivered as a fully managed hybrid cloud service. We backup, archive, and restore data stored across your organization within applications, databases, servers, remote offices, and mobile devices.

Hybrid Delivery On-Demand

iVision Fusion Protect is a hybrid cloud service platform that combines the integration and convenience of local on-prem backup and restoration with encrypted, secured cloud-based storage for all archive and retention needs.

FUSION RECOVERY

Focus on Business

Reduce failover time and disruptions in IT operations to help you stay focused on keeping your business operational.

Real Recovery. Real Results.

iVision Fusion Recovery helps eliminate risk through a fully-managed Disaster-Recovery-as-a-Service (DRaaS) offering that provides immediate access to enterprise-class cloud resources for protection of your primary services and applications.

Capacity On-Demand

iVision Fusion Recovery is built on the industry's leading cloud-enabled technologies. It offers an elastic capacity on-demand consumption model that allows you to consume only what you need, when you need it.

FUSION PROTECT

FUSION RECOVERY

Eliminate the OPEX burden and complexity of on-prem backup solutions.

30-50% lower cost than traditional on-prem solutions.

Core Service Features Include:

- Consumption-based usage model
- 24x7x365 comprehensive onboarding, support and restoration services managed by iVision's SSAE-16, SOC 2, and ITIL certified Engineering & Support Services Team (ESS)
- Secured & operated in Tier3 SSAE-16 SOC1/2/3 compliant US-based data centers

- File or image-level backup and restoration for physical and virtual servers, desktops, and mobile devices
- Rich support for Windows, Linux, AIX, AS/400 and direct SAN/NAS integration
- Granular application-aware protection for Exchange, SQL, Oracle, SAP, Sharepoint, and more
- Hybrid cloud integration with support for Microsoft Azure, Office365
- Optional E-Discovery, compliance and integrated AES 256-bit encryption

- Support for virtual and physical servers
- Flexible replication models supporting array or software-based technologies
- Customizable RTOs with near-zero RPOs using journal-based CDP replication features
- Virtualized L2-L7 services for seamless transition of core network services
- Dedicated circuit or managed IPSEC-VPN connectivity options with integrated WAN acceleration

BETTER TOGETHER

iVision Cloud with Fusion Protect and Recovery is just one part of a healthy Business Continuity Management System (BCMS). Find out how you can get started building your BCMS today!
